Elaine N. Marib was a college teacher when she returned to school for an R.N. degree and an M.S. gerontology nurse. She is an Emeritus Professor of Biology at Holyoke Community College in Holyoake, Massachusetts, and a visiting professor at Edison Community College in Fort Myers, Florida. Her book, Human Anatomy and Physiology, is part of the Benjamin/Cummings series in life sciences. Start your review of Theatomy and Physiology Coloring Workbook: A Complete Study Guide I Love This Book. I feel like a little baby coloring in the photos and I'm learning at the same time. Hoo-hoo! I think coloring in different parts helped me remember more. very easy to understand as well. Page 2 For Elaine N. Marib, taking into account the student's point of view has always been an integral part of her teaching style. Dr. Marib began her teaching career at Springfield College, where she taught anatomy and physiology in physical education. She then joined the Department of Biological Sciences at Holyoke Community College in 1969 after receiving her doctorate in zoology from the University of Massachusetts at Amherst. While teaching at Holyoake Community College, where many of her students pursued nursing degrees, she developed a desire to better understand the link between human body research and the clinical aspects of care practice. To this end, while continuing to teach full-time, Dr. Marib continued her nursing education, which culminated in a Master of Science degree with a clinical specialization in gerontology from the University of Massachusetts. It is this experience, along with stories from the field, including former students, now in the health career, which has reported the development of a unique perspective and accessibility for which her texts and laboratory guides are known. In his ongoing commitment to students and its realization of the challenges they face, Dr. Marieb gave a generous opportunity for students to further their education. She is contributing to a new direction, a new career program at Holyoake Community College, providing several full-year scholarships each year for women returning to college after a break or who attend college for the first time and otherwise will not be able to continue their studies without financial support. She funds the E. N. Marieb Science Research Awards at Mount Holyoke College, which promotes research students in science, and has generously contributed to the University of Massachusetts at Amherst, where she has provided funding for the reconstruction and instrumentation of the advanced cytology research laboratory that bears her name. In 1994, Dr. Marieb received a philanthropist award from the National Resource Development Council, the American Association of Community Colleges, which recognizes its continued sponsorship of student teachers' awards and other academic contributions to the Community College. In May 2000, the Holyoke College Science Building was named after her. In addition, while actively involved as an author, Dr. Marib acts as a consultant for the Benjamin Cummings InterActive Physiology CD-ROM series, and is an active member of the Society for Human Anatomy and Physiology (HAPS). Anatomy and Physiology, the second edition is the latest expression of her commitment to the needs of students in their quest to study ASA. For courses in 1- and 2-semester Anatomy and Physiology How is an incredibly attractive educational guide that can be used either independently or in conjunction with any book of APPs. Anatomy and Physiology Coloring Workbook helps students get most of their APP classes. Dr. Elaine Marib thoughtfully developed a text to include a wide range of coloring activities and self-assessment. Students benefit from updated questions at the clinic, a new large fabric figure and updated terminology. Also, the text of the Incredible Journey visualization exercise take students on an exciting adventure through the human body. Each step leads them into an amazing world where they can learn more about anatomical structures and physiological functions. Sarikas ©2015 Access Card Code NEW! The updated terminology was integrated throughout the text. New functions! Completely new questions in the clinic have been included to help students apply what they have learned in a real clinical setting. New functions! Multiple choice options have been reworked to promote critical thinking. New functions! The main shape of the fabric has been added to the text. New functions! The head openers have been redesigned. The work book contains more than 100 colors that enhance concepts through active learning. The Incredible Journey visualization exercises encourage students to imagine that they are traveling through the human body. A wide range of exercises includes completing the selection of key options, relevant terms or descriptions, chart markings, true/false and definition questions. Elimination issues require students to find similarities or different similarities between a number of structures or objects. The answers to all the questions are at the back of the book. New functions! The updated terminology was integrated throughout the text. New functions! Completely new questions in the clinic have been included to help students apply what they have learned in a real clinical setting. New functions! Multiple choice options have been reworked to promote critical thinking. New functions! The main shape of the fabric has been added to the text. New functions!
